மாதிரிகள்: Stop and wait, Go back N, Selective repeat

↳ வாய்ந்த போகுவதற்கான மாதிரி

↳ Stop-and-wait

↳ send packet and wait for ack. Once the ack reaches the sender, it transmits the next packet. If ack is not received, it retransmits the previous packet.

↳ Go Back N

↳ the sender sends N packets which equal to the window size. Then, the sender waits for a cumulative ack to send more packets. The receiver receives only

↳ R_n அன்றையிலேயே

in-order packets. As in case of packet loss, the entire window would be retransmitted.

↳ Selective Repeat

↳ sender sends packet of window size and the receiver acknowledges all packets whether they were received in order or not. In this case the receiver maintains a buffer to contain out-of-order packets and sorts them. The sender selectively retransmits the lost packet and moves window forward.
