

# Data Manipulation

Using Python

#### Dr. Rathachai Chawuthai

Department of Computer Engineering
Faculty of Engineering
King Mongkut's Institute of Technology Ladkrabang

#### **Data Science Process**

## Python

# python basic

#### List

- [ 1, 2, "a" ]
- [1, 2, 3] + [10, 10, 10] = ? = msconcar
- [1, 2, 3] \* 10 = ? Ms dup con

#### Dictionary

• { "a":1, "b":2 }

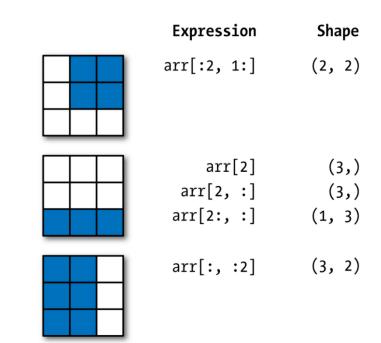

#### Tuples

• (1, 2, "a") immutable

## Numpy

NumPy (or Numpy) is a Linear Algebra Library for Python, the reason it is so important for Data Science with Python is that almost all of the libraries in the PyData Ecosystem rely on NumPy as one of their main building blocks.

- Array
- Matrix
- Index
- Selection
- Operation

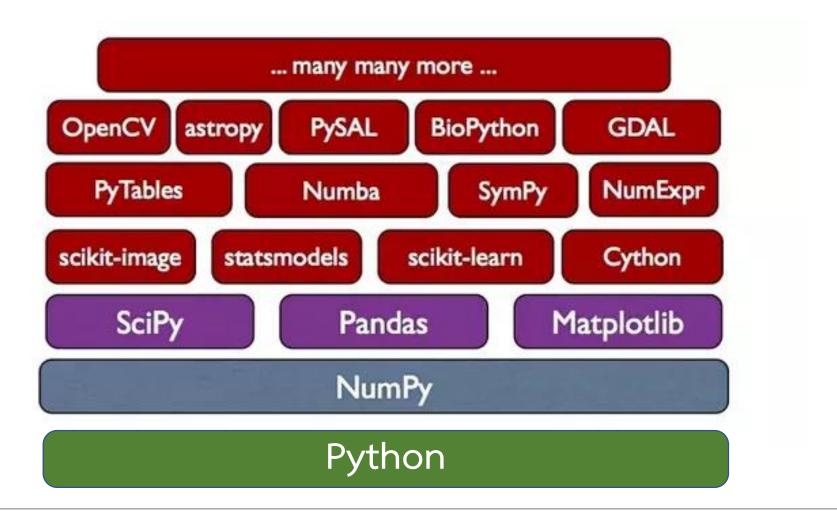

#### **Pandas**

- pandas is an open source, BSD-licensed library providing high-performance, easy-to-use data structures and data analysis tools for the Python programming language.
  - Series
  - DataFrame
  - Operation
  - Join DataFrames
  - Input and Output
  - GroupBy

```
1 iris = sns.load dataset('iris')
In [2]:
In [3]:
            1 #np.r is useful when trying to construct arrays
            2 np.r [0:5, -5:0]
Out[3]: array([0, 1, 2, 3, 4, -5, -4, -3, -2, -1])
            1 iris.iloc[np.r [0:5, -5:0]]
In [4]:
Out[4]:
               sepal_length sepal_width petal_length petal_width species
            0
                       5.1
                                   3.5
                                               1.4
                                                          0.2
                                                                setosa
                       4.9
                                   3.0
                                               1.4
                                                          0.2
                                                               setosa
                       4.7
                                   3.2
                                               1.3
                                                          0.2
            2
                                                               setosa
            3
                       4.6
                                   3.1
                                               1.5
                                                          0.2
                                                                setosa
                       5.0
                                   3.6
                                               1.4
                                                          0.2
                                                               setosa
